PORTFOLIO: yaigenes.infrabio.dev

With 5+ years of experience as a Site Reliability Engineer and a background in biology, I bring a unique blend of technical depth and systems-thinking to infrastructure engineering. My expertise spans Kubernetes at scale, GitOps, cost optimisation, and SRE automation — enabling me to build reliable, observable, and cost-efficient platforms. **Currently SRE at Hydrolix (OysterHR Spain) since Jul 2024**, managing **234+ multi-cloud Kubernetes clusters** across AWS, GCP, and Linode for enterprise customers including Disney, Hulu, Fox, and Viacom18. Delivered an estimated **$350K–$500K in compute savings and avoided engineering time** over two years through targeted automation, GitOps adoption, and progressive delivery.

LATEST IT EXPERIENCES

Jul 2024 – Present — full-time employee

Site Reliability Engineer

Hydrolix – Cloud-native streaming analytics platform. Managing 234+ multi-cloud Kubernetes clusters (AWS/GCP/Linode) for enterprise customers. Led the **Vertical Pod Autoscaler rollout** across 200+ production clusters, achieving a **25.9% compute cost reduction** ($824→$611/TB) with one cluster cutting nodes by 74% — est. **$168K–$336K/year** saved on that cluster alone. Drove **company-wide GitOps adoption** from scratch — 234 clusters and 468 applications now under automated ArgoCD delivery, per-cluster change time cut from ~30 min to under 10 min. Co-built a **progressive delivery platform** replacing 17–50 engineer-hours of manual upgrade coordination per release with health-gated batch rollouts, real-time DAG visualisation, and automated health checks. Deployed **25 Prometheus stacks** across all previously unmonitored customer-facing Grafana instances. Built automated OOM remediation, eliminating a recurring 30–45 min on-call response. Owned EMEA on-call, IC for 10+ P0–P2 incidents, and capacity management for Hulu Super Bowl and Viacom18 IPL events. 1,468 GitHub commits · 50+ technical documents.

Kubernetes (LKE/EKS/GKE) · ArgoCD · Go · Pulumi · Prometheus · Grafana · Argo Workflows · VPA · Helm · Terraform · AWS · GCP · Linode

Jul 2023 – Jul 2024 (1 year) — full-time employee

Senior Site Reliability Engineer

Triggle Spain SLU - Tourism PaaS cloud-native company in AWS and Azure. Led platform cost reduction (**27% reduction**), automated CI/CD and enhanced deployment times (**500% faster**), automated cleanup tasks (**saving 10% cost via cron jobs**), upgraded EKS from 1.24 to 1.29 across 4 clusters (**reducing extended support cost by 82.5%** with autoscaling groups), replaced paid on-call platform with Grafana OnCall at zero cost. Managed a DevOps team of 3 people.

Feb 2023 – Jul 2023 (6 months) — full-time employee

Senior Site Reliability Engineer

atSistemas Consulting - Airlines customer. Developed and maintained on-premises and AWS cloud services, automated deployments, ensured system

EDUCATION

2020 - 2021
MSc. Fullstack Developer
Assembler School of Software Eng.

2019 - 2020
MSc. degree in Plant Breeding
Universitat Politecnica de Valencia

2018 - 2019
MSc. degree in Plant Biology
Swedish University of Agricultural Sciences

LANGUAGES

Spanish - Mother tongue
English - Bilingual
Swedish - Basic

PREVIOUS

Intensive course .NETCore, SOLID, Software Architecture Pattern
Vueling University

RESEARCH PUBLICATIONS

Influence of the Phenological State of in the Antioxidant Potential and Chemical Composition of Ageratina havanensis.

PROGRAMMING LANGUAGES

2 errors

scaling, mentored two Jr. SRE profiles. Stack: Python, Bash, CloudFormation, Ansible, Kubernetes, Jenkins, Docker, Datadog, Bitbucket/Git.

Feb 2022 – Feb 2023 (1 year) full-time employee

Devops Lifecycle Engineer

Accenture Spain - Customer Banking. Built a branch inspection tool (GitLab API + Python) that **cut CI build times by 80%** and reduced EC2 Jenkins agent usage by 10%. Operated a DevOps-driven monitoring architecture across AWS, Kubernetes, Jenkins, SonarQube, Nexus, Gitlab, ELK, Grafana, Python, Bash and Go.

BIO EXPERIENCE

Dec 2016 – Aug 2018 (1 year 8 months) full-time employee

Tech Coordinator I+D Environmental Agency, Cuba

Mangrove Ecosystems Biological Restoration. Main tasks: (1) GIS modelling and data collection. (2) Team work coordination.
